

Going Green? Try Using A Rain Barrel

In using a rain barrel to collect and recycle water, there are a variety of different uses that you can benefit from. Every single year there are more people who enjoy the benefits of using these handy containers that are also very easy to use. In using fresh rainwater there are several tasks that you can perform such as watering your plants, washing your cars, or even for the sauna in your backyard, the list is limitless. Another enjoyed advantage is the large amount of money you generally will spend on your water bill each month that can also be saved.

There are many summers where many of us have experienced low levels of rainfall. This can very quickly become a risky problem for those that may have gardens and for those that may have the landscape of their homes decorated with numerous brightly colored plants. One convenient way that you can solve these frustrating problems is by collecting fresh rainwater whenever you can by using a rain barrel that has been placed conveniently underneath a downspout drain that runs off the roof of your home.

It might be surprising to know that in collecting rainwater, many families can save up to 1,000 gallons during the summer when large amounts are generally being used. In several cases 40 percent of this is water that is being used to tend to such tasks as taking care of the yard and plants. Just imagine the other fun things you could be spending your hard earned money on that these high amounts can add up to each month.

By purchasing a couple of items from any hardware store, you can choose to make a [rain barrel](#) yourself and it can be achieved very easily. You can also choose to buy one that is already made as well. In making the decision to construct this type of container yourself, you will quickly find that the World Wide Web can be a very resourceful tool to use in gathering helpful information and the directions that you will need for building your own.

There are also specific filters that you can use that will allow you to be able to save the liquid that you have collected for several months. In adding a filter of this type, you can use this precious liquid whenever you would like to. References [_P](#)
